

## Mosquito Dunks

There are approximately 2,500 species of mosquitoes throughout the world. The active ingredient in DUNKS will kill the larvae of all species of mosquitoes. As a mosquito dunk slowly dissolves, it releases a natural bacterium that is deadly to mosquito larvae but is harmless to other living things; birds, fish, wildlife and pets. Therefore, it is safe to use in pet watering bowls, horse troughs, lakes, bird baths, fishponds, flowerpots, aquatic gardens, flood control basins, unused swimming pools and other areas where standing water is a possible breeding ground for mosquitoes.

### Directions:

Each individual dunk will last up to 30 days. Use one Mosquito Dunk for up to 100 square feet of water surface, regardless of water depth. To prevent them from being washed away, the dunks can be anchored using a string tied through the center hole or they can be staked in place. For smaller areas (flowerpots, bird baths, pet water bowls,) Mosquito Dunks can easily be broken into smaller pieces.

### Suggested Amounts to Use:

1 to 5 square feet use  $\frac{1}{4}$  Dunk --- 5 to 25 square feet use  $\frac{1}{2}$  Dunk ----25 to 100 square feet use 1 Dunk
